PROJECT MERIDIAN

From job titles to redeployable capabilities

A Board decision on the first 90 days, the Field Metering disruption, and an enterprise-wide path to capability-based work.

Recommendation: approve a bounded demand-led proof. Do not commit to mass absorption without validated receiving work.

Board / Ministry discussion brief • Illustrative case proposal

OPEN THE CAPABILITY DECISION EXPERIENCE

See the skill portfolio behind the job title.

Primary user: Director of Human Capital. The demo compares four cases from 24 fictional employee profiles; proposed receiving work is not verified Client demand.

https://aliftan.github.io/rakamin-meridian-workforce-decision-lab/

LIVE DEMO / CAPABILITY & TRANSITION

From Exposure Map click “Explore capability & transition cases” → compare the four cases → open FM-027 → examine task evidence and the next action. Select a destination role, then choose “Inspect receiving-work evidence” to test demand separately.

DESIGNED AHA MOMENT — MODULE 04 · CAPABILITY & TRANSITION. Open FM-027 from the four-case matrix: a title hides task capability, but even strong task evidence does not establish a funded receiving role or authorise placement.

EXECUTIVE DECISION

Choose a demand-led capability transformation.

The first investment is a proof of decision quality, not a promise to absorb every displaced work equivalent.

WHAT WE BUILD

A capability layer above positions: work redesign → task bands → evidence portfolio → human-reviewed transition.

WHERE WE PROVE IT

Field Metering after the Day-30 discovery. Test smart-meter-adjacent demand in 1–2 regions with volunteer safeguards.

WHAT WE DO NOT PROMISE

No mass layoffs; no system replacement; no enterprise-wide individual scoring; no unverified absorption target.

Board ask: authorize a cross-functional evidence sprint, controlled pilot and decision rights; release scale only through four gates.

BOARD OUTCOMES / MEASURES & DECISION RIGHTS

What the Board can hold us to.

The first 90 days establish verified decisions—not a fabricated placement target. Track people, receiving-work capacity and work equivalents separately.

DAY 30 / DATA & TRUST

Know what is reliable.

Proposed reporting threshold: identity matched / unmatched / collision rates for 100% of pilot regions (1–2); log union briefing and purpose limitation. No claim of a 100% match rate.

Board sees: regional exception ledger + union briefing pack

DAY 60 / DEMAND PROOF

Prove the pathway has real work.

Proposed D60 proof gate: ≥1 Backed role with two independent workload sources, approved capacity, an accountable owner and SME task rubric. Failure is reported, not disguised.

If none: no scaled matching or placement claims

DAY 90 / CONTROLLED PILOT

Decide with evidence.

Report opt-in cohort size against a planning ceiling of 500 assessments (not a recruitment quota); assessed / unassessed / contested records and Backed vs Claimed demand. Zero automated adverse decisions.

Board sees: continue / adjust / hold decision pack

MONTH 18 / MONTH 36 / OUTCOMES

Measure absorption honestly.

Track the scenario's unresolved gap (M18: 2,799 WE ; M36: 2,535 WE) against validated receiving work and actual confirmed placements.

Model baselines are not operational targets

Success condition: traceable work redesign, evidence-led mobility options, protected workers and an informed funding decision—not certificates or assumed vacancies.

WHY THIS IS NOT AN “AI TRAINING” PROBLEM

Work is changing faster than position-based decisions.

The Client cannot credibly redeploy people if titles, identities, work demand and skills cannot be connected.

01

52,000

employees across regions + HQ

02

1,800+

titles tied to grade and seat

03

45%

records with blank skills

The decision problem

How do we trace changing tasks → demonstrable capability → funded receiving work → lawful transition, without changing contracts or accessing Oracle payroll?

DAY 30 CHANGES THE ASSIGNMENT

4,200 potential work equivalents are exposed within 18 months.

The finding surfaces after foundation work begins—not on Day 1. Union concerns and payroll restrictions require an immediate response.

CASE FACT

6,000

Field Metering workers

CASE ESTIMATE

70%

Potentially automatable

6,000 × 70%

4,200

Potential work equivalents

ILLUSTRATIVE

85%

Assumed realised share

4,200 × 85%

3,570

Realised work displacement

Work equivalents are not identified people, vacancies or legally redundant employees. The 85% realisation assumption is not in the brief.

Day 30 = response gate: union briefing, data request, scope reset, Board-owned cross-functional authority.

FOUR DELIVERY APPROACHES / THREE BUSINESS AREAS SCREENED

Why demand-led sequencing wins the first 90 days.

Compare urgency, evidence maturity and 90-day proof feasibility before choosing the first deep pilot. Other families remain synthetic hypotheses.

FIELD METERING — CHOOSE
18-month case clock · Day-30 evidence · deep task pilot feasible

CUSTOMER CONTACT — TRIAGE
24–36 months synthetic · possible scale · task demand unverified

BILLING OPERATIONS — TRIAGE
24–36 months synthetic · plausible routine work · insufficient evidence

Option	Useful for	Trade-off / 90-day realism	Decision
Enterprise deep-map	Full taxonomy detail	Too slow and intrusive at 52k / 45% skill blanks	Defer
Enterprise triage + targeted families	Visibility + selective depth	Good competitor; still requires priority choice	Keep as layer
Demand-led Field Metering proof	Real receiving work + skills evidence	Coverage incomplete; demand may not materialise	CHOOSE
Mass training / communications	Fast reach	May produce certifications without destination jobs	Reject first

Out of Day-90 scope: 52k individual assessments, SAP/Oracle replacement, title/grade contract rewrites, mass placements.

WHERE THE NEXT DISRUPTION MAY CONCENTRATE

Field Metering goes first on evidence and timing—not exposure size alone.

Only Field Metering has brief-sourced disruption evidence: 6,000 people, 70% task exposure (4,200 WE) and an 18-month clock. Other families are scenario ranges, not Client findings.

Job family	Workforce	Task exposure	Exposed work (WE)	Impact	Evidence
Field Metering / Manual Operations	**6,000**	**70%**	**4,200**	**18 mo**	**Brief estimate**
Customer Contact / Service	6,500	20–55%	1,300–3,575	24–36 mo	Synthetic
Billing / Revenue Operations	3,800	25–60%	950–2,280	24–36 mo	Synthetic
Finance / Shared Services	4,200	20–50%	840–2,100	24–36 mo	Synthetic
Asset Maintenance / Inspection	7,800	10–35%	780–2,730	24–36 mo	Synthetic
Network Operations / Monitoring	5,900	15–45%	885–2,655	24–36 mo	Synthetic
Engineering / Technical Planning	4,100	10–30%	410–1,230	24–36 mo	Synthetic
Procurement / Supply Chain	3,000	20–50%	600–1,500	24–36 mo	Synthetic
Safety, Quality / Compliance	2,400	5–25%	120–600	24–36 mo	Synthetic
IT, Data / Digital	3,600	10–40%	360–1,440	24–36 mo	Synthetic
People / Corporate Services	3,500	15–45%	525–1,575	24–36 mo	Synthetic
Leadership / Regional Management	1,200	5–25%	60–300	24–36 mo	Synthetic

Risk insight: known exposure concentrates in Field Metering (11.5% of 52,000 people; 4,200 WE). Other 11 families imply 6,830–19,985 WE only if synthetic ranges held; do not add these as a workforce forecast or rank actual redundancy.

KEEP EMPLOYMENT IDENTITY. ADD A CAPABILITY LAYER.

Keep position and grade. Add verified task-level capabilities.

Existing employment terms stay intact; capability evidence supports human-reviewed mobility.

01 SOURCE
Title + grade
HRIS record remains authoritative

02 RESOLVE
Identity crosswalk
Resolve IDs; steward reviews conflicts

03 NORMALISE
Canonical role
Task similarity + local exceptions

04 DESCRIBE
Task-level bands
Observable B1–B4 task criteria

05 VERIFY
Skill evidence
Proficiency and confidence kept separate

06 MATCH
Backed work
Demand verified; human review and consent

Missing skills data means UNASSESSED—not incapable. Employees can correct their records; consequential decisions require independent assessment.

RESOLVE IDENTITIES BEFORE SCORING CAPABILITY

SAP anchors the employee record; ambiguities go to a steward—not a model guess.

Oracle payroll stays out of scope. Old performance ratings do not establish skill proficiency.

INPUTS

- SAP SuccessFactors
- Moodle learning
- Legacy assessment
- Regional performance

CONTROLLED CROSSWALK

- Source ID + matching method
- Approved effective dates
- Steward review / exceptions
- Employee correction

DECISION-READY LAYER

- Canonical role and family
- Task evidence / bands
- Confidence + provenance
- Access purpose + audit log

Do not join Oracle payroll, reverse-engineer salary, or use missing evidence as a negative employability score.

CAPABILITY ARCHITECTURE / NORMALISATION

Normalise tasks—not job-title strings.

Illustrative mappings for proof design; 200 archetypes is an effort assumption, not a measured Client result.

ORIGINAL SOURCE RECORDS

Engineer Madya	Region 1 · brief example
Senior Technician II	Region 2 · brief example
Meter Reader	Region 3 · synthetic

CANONICAL ROLES — PROVISIONAL

Exception Handler (Region 1 + Region 2 only if SME task review passes)

Meter Reading & Validation (Region 3 pending task check)

Keep original title / grade; same title can split across regions. No personnel matching until mapping and identity are validated.

ROLE STRUCTURE

1,800+ titles → **~200 canonical archetypes** (hypothetical) → **12 job families** (illustrative)

PERSON RECORD

Grade (unchanged) **+ domain** (e.g., Metering Operations) **+ skill portfolio** (task · B1–B4 · evidence confidence)

Identity: HR-authorised deterministic key → candidate probabilistic match → steward adjudication. Report matched/unmatched/collision rates by region at Day 30; no Oracle payroll.

Leveling rule: B1 guided recognition → B2 independent routine work → B3 complex exception judgement → B4 procedure improvement. Dreyfus (2004) informs skill learning, but is NOT a 1:1 crosswalk to these four task bands or the Client's legacy five levels.

WORK REDESIGN / WHAT TECHNOLOGY CHANGES

The job changes from collection to exception-led work.

Illustrative process, to be validated with Operations and safety SMEs; not evidence of funded vacancies.

TODAY / MANUAL OPERATIONS

Visit & read
Human field collection

→

Log anomaly
Local or paper record

→

Supervisor check
Batch review

→

Repeat visit
Travel to verify

PROPOSED / SMART-METER OPERATIONS

Sense & flag
Device / rules engine

→

Triage exception
Human B1–B2 workflow

→

Investigate
Complex cases: B3

→

Authorize + assure
Safety approval + QA

Design implication: assess anomaly investigation, digital workflow, exception resolution and safety authority separately—not generic tenure.

Work-design lens: Autor, Levy & Murnane (2003) distinguish rule-based tasks from nonroutine judgement; the specific smart-meter task map still requires local Operations and safety validation.

CAPABILITY EVIDENCE / WORKED EXAMPLE

A title hides capability. Task evidence makes it actionable.

FM-027 is one of 24 fictional test profiles, not a workforce sample. Its title and grade stay intact; no automatic placement.

B1 · Guided recognition	B2 · Routine resolution	B3 · Complex investigation	B4 · Improve and assure procedure

POSITION RECORD

Engineer Madya

Title + grade retained
Blank skill field = unassessed

EVIDENCE PORTFOLIO — FICTIONAL

Anomaly investigation: B3 · High confidence

Fictional complex-case work sample and assessor; digital workflow unassessed; safety authorisation pending.

TEST RECEIVING WORK / METER DATA VERIFICATION

Why B3? The fictional complex-case sample supports independent anomaly investigation, not B2 digital validation or safety authorisation. The proposed receiving role remains Claimed, not Backed.

Compare FM-011 (strong evidence), FM-021 (contested), and FM-033 (expired authority) in the app. No placement without Backed work, consent, current safety authority, and human review.

STANDARDS FOR VOCABULARY. LOCAL PROOF FOR WORK.

A hybrid architecture is the chosen trade-off—not a custom skills catalogue built from scratch.

ADOPT LARGELY AS-IS

Rp2.93B

Lower effort, weaker regional specificity

HYBRID — CHOOSE

Rp3.79B

O*NET / ESCO + local task tests; SKKNI / KKNI, selective SFIA

BUILD BESPOKE

Rp5.02B

Local fit, high SME and maintenance load

Effort assumptions: 1,800-title screening, ~200 hypothetical archetypes, up to 500 opt-in assessments. Hybrid weak points: SME calibration load and unpriced SFIA/platform licence; may overlap contracted delivery and Client effort.

Source owners: USDOL O*NET (CC BY 4.0); EU ESCO (free dataset); Kemnaker SKKNI/KKNI; SFIA Foundation (licence check). Effort figures exclude licence fees.

FRAMEWORK DECISION / OWNER, RIGHTS, COST

Reference data is accessible; enterprise adoption still carries cost.

Use open task taxonomies as vocabulary, SKKNI/KKNI as local reference, and a separate Client-validated grade/job-evaluation crosswalk. SAP native skills and commercial ontologies need fit, rights and cost checks—not assumed replacement.

REFERENCE	OWNER / RIGHTS	DATA / LICENCE COST	DECISION FOR MERIDIAN
O*NET occupation data	US DOL / CC BY 4.0	Dataset use: no data fee	Reuse task and skill terms; credit source
ESCO occupations/skills	European Commission / free download	Dataset download: free	Crosswalk to local tasks; localise
SKKNI / KKNI	Indonesian public standards	Reference; local delivery not priced	Use applicable task / qualification norms
SFIA digital capabilities	SFIA Foundation / licensed	Large-scale/commercial fee: quote required	Use selectively; obtain licence decision

Chosen hybrid: Rp3.7875B scoped effort (planning assumption) + commercial licence / platform / training costs still unpriced.

Sources: onetcenter.org/license_db.html · esco.ec.europa.eu/en/use-esco/download · sfia-online.org/en/about-sfia/licensing-sfia

A DESTINATION IS REAL ONLY WHEN THE WORK IS REAL

Investigate smart-meter-adjacent demand before reskilling commitments.

Derived from Slide 12's proposed exception-led work: investigation (step 3), digital verification (steps 1–3) and work-order assurance (step 4). The 300 + 220 + 140 = 660 nonvendor WE and 240 optional vendor WE remain unverified planning assumptions.

Candidate receiving work / capacity	Illustrative required task and target band	Independent proof needed
Meter data verification 300 WE · nonvendor	Anomaly investigation ≥B2; digital validation workflow ≥B2; safety authority checked separately.	Sampled case-hours + independent service-ticket / QA record; funded owner.
Smart-meter exception resolution 220 WE · nonvendor	Complex anomaly judgment B3; telemetry / exception workflow B2; safety authorisation separate.	Alert volume × resolution time; independent escalation log; approved shift capacity.
Digital work-order assurance 140 WE · nonvendor	Work-order QA B2 and digital audit workflow B2; task test and authority SME-defined.	Work-order exceptions × assurance time; dispatch/audit record; budget owner.
Contractor substitution (optional) 240 WE · vendor scenario	No single universal band: assess contracted task and safety requirements separately.	Internal workload *and* separately avoidable vendor invoices, contract rights, authorisation.

Claimed → Backed (two independent workload signals + approved capacity) → Matchable (task bands / safety / consent) → Confirmed placement. The 900 WE are not vacancies.

AUTOMATION MOVES FASTER THAN WORKFORCE ABSORPTION

The model explains the pressure; it does not forecast named employees or verified placements.

Brief: 6,000 × 70% = 4,200 exposed-work equivalents; synthetic 85% realization gives 3,570 modelled displacement.

MONTH 36

3,570

Displaced WE

M36 / POTENTIAL MATCH

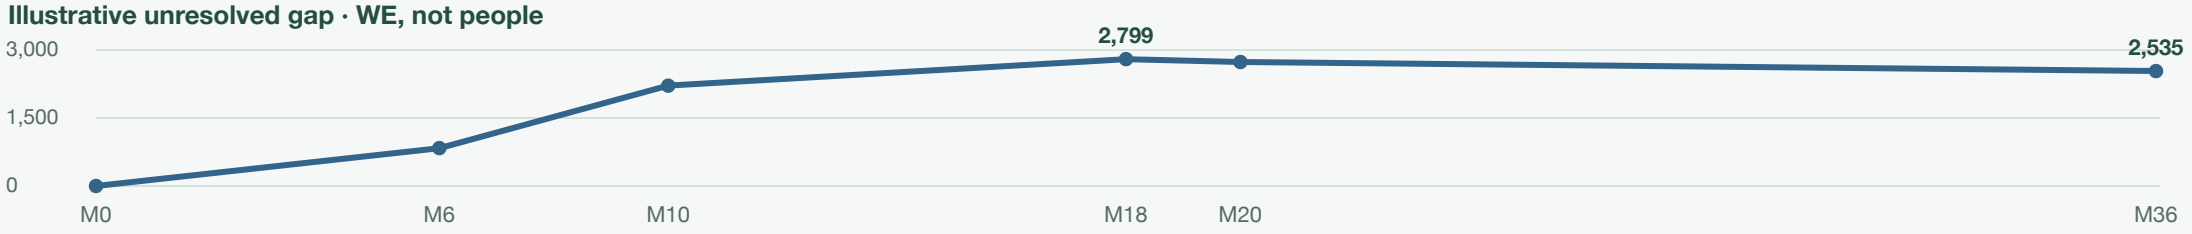

585

Potential matching

M36 / UNRESOLVED

2,535

Unresolved WE

Displaced – modelled matching – relevant attrition = unresolved gap. Attrition is not redeployment; all placements remain unverified.

SEQUENCING BUYS TIME; IT DOES NOT CREATE WORK

Do not assume HC can delay a rollout already procured by Technology.

Gating is optional, Board-authorised and justified only by additional validated transition progress.

STRESS TEST

Zero vendor

No gate

M36 / ZERO-VENDOR

2,691

M36 unresolved WE

M10 temporary gap relief ≈1,201 WE under an illustrative 3-month gate; modes converge by M20. Delay economics and authority unverified.

RECEIVING-WORK CAPACITY IS THE BINDING CONSTRAINT

900 assumed WE is not 900 proven jobs. At M18, the model requires ~5,146 receiving-work WE at 65% matchability.

Illustrative receiving work

ILLUSTRATIVE RECEIVING WORK

900 WE

Illustrative; not validated

REQUIRED RECEIVING WORK (M18, AFTER ATTRITION)

≈5,146 WE

Required receiving work after M18 attrition

≈5,146 WE required · 900 WE illustrative ≈17.5%

What changes the gap: verified operating demand, safe redesign, cross-regional mobility, relevant attrition, and timed readiness.

M18 required work = (3,570 - 225 attrition) / 65% ≈ 5,146 WE. By M36: (3,570 - 450) / 65% = 4,800 WE. Both are model thresholds, not verified demand.

UNRESOLVED WORK REQUIRES AN OWNER—NOT A FICTIONAL VACANCY

If sufficient work cannot be backed, escalate structural workforce capacity to the Board.

Under the illustrative M36 baseline, 2,535 unresolved work-equivalents remain—not 2,535 identified surplus employees. Escalate the structural operating gap to the Board, with union/Ministry safeguards and real receiving-work evidence.

1 / OPERATIONS

Redesign existing work

Document value, safety and work mix

2 / HC + REGIONAL OPS

Voluntary regional mobility

Use real backed receiving work

3 / OPERATIONS + TECH

Time-bound productive assignments

QA / commissioning only with scope

4 / HC + FINANCE

Natural attrition

Modelled attrition is NOT a dismissal or blanket no-backfill order; test operational necessity and rights first.

5 / BOARD + TECHNOLOGY

Selective sequencing

Only if Board enables cross-function gate

6 / BOARD + MINISTRY LIAISON

Structural escalation

Operating model / new work decisions

A “work-equivalent gap” is not a list of surplus employees. Individual adverse decisions are out of scope for this capability proof.

SCALE THE LAYER, NOT A CONTRACT REWRITE

The workforce migrates through controlled role archetypes and trusted evidence; formal positions remain intact.

Replace “menunggu kursi kosong” as the only advancement route with a voluntary, evidence-based capability pathway—without erasing seniority, experience, existing title, grade, contract or payroll.

FIRST 90 DAYS

Title inventory; family triage; Field Metering proof in 1–2 regions

NEXT WAVES

SME-validate priority archetypes; regional managers sponsor work samples and employee champions support opt-in, correction and appeals.

ENTERPRISE OPERATING MODEL

Versioned capability library, employee correction, QA, review and sunset rules

Trust is an operating control, not a communications workstream.

Union-facing message: this is not a PHK list and no role changes automatically. D0 purpose charter → D30 factual exposure disclosure → D60 opt-in review and appeals → D90 Board/Ministry evidence pack. If demand fails, the Board owns the unresolved work gap.

ENTERPRISE MIGRATION / MEASURABLE WAVES

Sequence 52,000 records without changing 52,000 contracts.

Phase gates are jointly owned by Human Capital, receiving Operations managers, regional SMEs, worker representatives and data stewards; no expansion without task evidence, safety review and a credible work owner.

01 / D0–90

Title / identity triage; Field Metering 1–2-region proof

02 / M4–12

SME-calibrated priority archetypes; opt-in cohorts

03 / M13–24

Expand to other high-exposure families, if evidence passes

04 / M25+

Versioned library, regional exceptions and re-assessment

WHEN IS A PERSON RESKILLABLE? / NOT INFERRED FROM TITLE OR 45% BLANK SKILLS

TASK GAP

Compare redesigned task requirements

EVIDENCE

Work sample, assessor, recency and safety

DEMAND

Funded work, timing, location, capacity

PERMISSION

Opt-in, steward review, employee correction

Report assessed / unassessed / contested by wave; count confirmed placements separately from modelled WE.

No enterprise reskillability percentage is justified until voluntary task evidence and validated receiving work exist.

DAY 30 IS A RESPONSE GATE. DAY 90 IS A DECISION.

A demonstrable enterprise foundation continues while Field Metering disruption is handled.

No claim that Field Metering receiving demand is validated before its discovery on Day 30.

D0–29

FOUNDATION

- Identity crosswalk
- Title/family triage
- Data + union protocol

D30

COMPLICATION

- Exposure evidence
- Union response
- Ops/Finance data request

D31–59

VALIDATE

- Workload + budget
- SME rubric
- Consent-based workflow

D60

EVIDENCE GATE

- Backed role?
- Fail → no scale promise
- Escalate structural gap

D61–89

CONTROLLED PROOF

- Human review pilot
- Economics + sensitivities
- Trust QA

D90

BOARD DECISION

- Evidence / Operational
- Decision / Trust
- Continue / Adjust / Hold

Day 60: one Backed role can prove the method; it cannot prove sufficient workforce absorption at scale.

THE CASH HURDLE IS CONDITIONAL ON VERIFIED CONTRACTS

The Board approves a bounded proof—not an unverified +290% vendor return.

Only Rp3.5B is brief-provided; Rp1.5B implementation and Rp1.0B support are planning assumptions.

ENGAGEMENT FEE

Rp3.5B

Rp3.5B contracted / 12 months

PROGRAMME CASH

Rp6.0B

Rp3.5B + Rp1.5B + Rp1.0B

VENDOR UNIT HURDLE

Rp1.54m

Per qualifying vendor FTE-month, if all 3,900 are avoidable

ZERO-CONTRACTOR CASE

–100%

Vendor-only model; other cash benefits unmodelled

CONDITIONAL VENDOR-ONLY CASH ROI | 0% capture: –100% • 25%: –2.5% • 50%: +95% • 100%: +290%
Break-even: 25.64% of hypothetical 3,900 qualifying FTE-months at Rp6m each; neither volume nor contract avoidability is established.

Fee-only recovery threshold: Rp3.5B / Rp6m ≈ 583 genuinely avoidable vendor FTE-months; programme-cash break-even instead uses Rp6.0B / Rp6m = 1,000. Neither is a confirmed return on the contracted Rp3.5B. Synthetic unit price, workload and contract avoidability require Finance proof.

BOARD FINANCE / SOURCE OF FUNDS

One illustrative cash envelope. One distinct resource estimate.

Finance must confirm which costs fall within the contracted fee, additional implementation or Client in-kind effort.

ENGAGEMENT FEE

Rp3.50B

Brief commitment / 12 months

IMPLEMENTATION

Rp1.50B

Synthetic Y1 delivery allowance

SUPPORT

Rp1.00B

Synthetic years 2–3 allowance

Rp6.00B = illustrative 36-month cash denominator (NOT verified full TCO)

SEPARATE: hybrid architecture scope ≈ Rp3.79B resource effort; 1,800 title screening / 200 assumed archetypes / 500 opt-in assessments.

Finance reconciliation rule: classify each Rp3.7875B resource-effort line as included fee, programme allowance, Client in-kind or genuinely incremental cash before adding it. Rp9.7875B assumes ALL effort is incremental—a stress ceiling, not a forecast. Licences, travel, full training and mobility remain unpriced.

COST OF INACTION: 12-MONTH TRANSITION DELAY

Delaying transition increases unresolved work while automation still proceeds.

A comparator with unchanged technology rollout; not a cash or employment forecast.

ADDITIONAL GAP / FIRST YEAR

1,404

WE-months; equivalent to delayed candidate matching

ADDITIONAL GAP / THROUGH M36

7,020

WE-months; 1,872 optional vendor + 5,148 nonvendor

Conditional vendor-cash opportunity: Rp2.25B in year 1; Rp11.23B through M36. Nonvendor productive value (not cash): Rp0-20.59B to M36. Neither is a verified net loss.

Vendor share = 156 / (429 + 156) of potential matches. First-year example: 1,404 delayed WE-months × 156/585 × Rp6m ≈ Rp2.25B; through M36: 7,020 × 156/585 × Rp6m ≈ Rp11.23B. These are scenario opportunities, NOT verified cash losses. No payroll or people-count inference.

Compare economic exposures without presenting layoffs as an option.

Synthetic stress test only. The Client prohibits mass layoffs; 3,570 WE is not a count of people to separate.

ACT NOW / BOUNDED PROOF

Rp6.0B

Illustrative 36m cash envelope
Rp3.5B contractual fee + Rp1.5B Y1 implementation + Rp1.0B support; architecture effort overlap unresolved.

WAIT 12 MONTHS

7,020 WE-mo

Additional unresolved pressure to M36
1,872 possible vendor FTE-mo × Rp6m = Rp11.23B cash opportunity only if contracts are avoidable; not net return.

LAYOFF → REHIRE / EXCLUDED

Rp12.0B

Illustrative, not a policy choice
500 hypothetical separations × Rp20m + 200 hypothetical hires × Rp10m. Disruption and legal costs unpriced.

No like-for-like net ROI is established: spending schedules, actual contracts, lawful exit costs and service effects are unverified.

The 500 hypothetical separations and 200 rehires are an intentionally independent, small-scale stress input—not a 3,570-WE-to-people conversion, not a legal entitlement estimate or evidence that layoffs save money.

MAKE THE METHOD REUSABLE WITHOUT EXPORTING CLIENT-SPECIFIC BIAS

Risk controls become a repeatable capability architecture product—not a one-off workforce spreadsheet.

False demand	No funded workload → no placement claim. Owner: Operations + Finance. Impact: High — no funded positions · likelihood unvalidated
Wrong identity	Steward queue, provenance, employee correction. Owner: HC Data. Impact: High — wrongful profile · likelihood unvalidated
Unsafe matching	Licences, practical evidence, independent reviewer. Owner: Safety + HC. Impact: High — safety/legal exposure · likelihood unvalidated
Union distrust	Purpose limits, opt-in pilot, opt-out. Owner: HC + Union liaison. Impact: High — trust/industrial action · likelihood unvalidated
Cost overrun	Reconcile fee, Client effort, licences. Owner: Finance + Procurement. Impact: Medium–High — overrun · likelihood unvalidated

Reusable Rakamin method

01 Identity crosswalk + stewardship

02 Job / task taxonomy schema

03 Observable proficiency rubrics

04 Receiving-demand evidence ladder

05 Human review + audit controls

Client-specific tasks, permissions, job families, labour agreements and operating constraints must be revalidated for each new client. Likelihood ratings remain unscored until owner-led calibration at Day 30.

BOARD RESOLUTION

Approve the proof. Condition the scale.

APPROVE SCOPE	Set cross-functional Ops/Technology/Finance authority and union-governed voluntary protocol; preserve grade, payroll boundaries and identity controls.
FUND & GATE	Illustrative M1–3 spend Rp1.25B = Rp875m pro-rated existing fee + Rp375m proposed implementation. Release additional funding only after scope/owner check.
ESCALATE	D60: zero Backed roles → no scaled mobility claims. D90: Evidence, Operations, Trust and Decision gates; structural residual capacity returns to Board.

The Board is not approving Rp6B as a verified total cost. Finance must reconcile architecture effort and exclusions before scale funding.

WORKING ASSUMPTIONS — CASE FACTS VS SCENARIOS

The model is a testable hypothesis, not a workforce forecast.

Numbers should be restated with Client evidence before any scale or employment decision.

Driver	Input	Status / test
Enterprise / Field Metering	52,000 / 6,000	Case facts
Automation exposure / timeline	70% / 18 months	Case estimate, not realisation
Realisation ceiling	85%	Synthetic assumption
Attrition / readiness	2.5% / 65%	Synthetic, region-specific validation
Receiving capacity	660 nonvendor + 240 vendor WE	Synthetic; vendor not in brief
Matched start / rollout gate	Month 5 / 3-month timing shift	Synthetic; gate authority unproven
Fee / illustrative programme	Rp3.5B / Rp6.0B	Brief / add-on assumptions
Vendor unit saving / discount	Rp6m per FTE-month / 10%	Rp6m is synthetic unit-price sensitivity; 10% is PV convention, not Client WACC

The scenario does not infer payroll, contract-based salaries or statutory separation liability. Different job families have different evidence confidence.

DISPLACEMENT, MATCH AND GAP RECONCILE BY MONTH

Model-derived snapshot under non-gateable rollout with the optional contractor assumption.

Month	Displaced	Matched nonvendor	Matched vendor	Attrition	Gap
M0	0	0	0	0	0
M6	989	57	21	75	836
M10	2,572	172	62	125	2,213
M18	3,570	400	146	225	2,799
M20	3,570	429	156	250	2,735
M36	3,570	429	156	450	2,535

Formula: max(0, realised displaced work – potential matches – relevant attrition). Matching ≠ confirmed placement.

CASH AND ECONOMIC VALUE MUST NOT BE MIXED

All currency in Rp billion unless otherwise marked.

Working	Formula / scenario assumption	Interpretation
Engagement recovery	3.5B / 6m = ~583 vendor FTE-months	Fee only; excludes delivery
Programme break-even	6.0B / 6m = 1,000 FTE-months	Full illustrative cost
Unit-price threshold	6.0B / 3,900 = Rp1.54m / month	Assumes all candidate vendor capacity is avoidable
Cumulative work-equivalents	Monthly model ramp M5–M18 + M19–M36 run rate = 25 equivalent full-rate months	156 vendor × 25 = 3,900; 429 nonvendor × 25 = 10,725 FTE-months, not people
Vendor full-capture cash	3,900 × Rp6m = Rp23.4B	Synthetic upside only
Full-capture cash ROI	(23.4 – 6.0) / 6.0 = +290%	Not a client forecast
Zero vendor cash ROI	(0 – 6.0) / 6.0 = –100%	Other categories not modelled
PV at 10% annual	+13.86B full-vendor / –5.57B zero	Costs smoothed; not approval case
Nonvendor economic value	10,725 FTE-mo × Rp0–4m	Noncash range only

3,900 and 10,725 are cumulative sums of modelled monthly potential matching (including phased M5–M18 ramp), not 36 months of full capacity or named hires. PV separately discounts synthetic timed cash at 10% annually against a smoothed Rp6B envelope; licences, contracts and timing need Finance validation.

THE ADOPTION ESTIMATE IS A WORKLOAD MODEL

Illustrative common scope: 1,800 title triage, 200 assumed archetypes, 500 voluntary assessments; not all 52,000 individuals.

Driver — illustrative	Adopt-as-is	Hybrid	Bespoke
Title screening + SME audit	Rp423m	Rp495m	Rp774m
Canonical archetype design + SME	Rp760m	Rp1,200m	Rp1,900m
Task band design + SME	Rp250m	Rp600m	Rp850m
Identity, assessment, governance, integration	Rp1,492.5m	Rp1,492.5m	Rp1,492.5m
TOTAL illustrative scoped effort	Rp2,925.5m	Rp3,787.5m	Rp5,016.5m

Not a quote or extra bill: may overlap fee, implementation, Client effort; excludes full-scale training, travel and commercial licences.

DECISION PERMISSIONS DEPEND ON EVIDENCE STRENGTH

Capability proficiency, evidence confidence and readiness remain three separate dimensions.

Evidence tier	Typical signals	What the system may do
Unassessed	Blank skill fields, no valid task proof	Offer opt-in assessment only
Low	Self-report, job title, old rating, course	Suggest exploration; no adverse decisions
Moderate	Corroborated observations, incomplete recency	Conditional development / second check
High	Relevant current task sample and independent review	Invite independent capability review; no placement without Backed work and safeguards
Contested flag	Disagreement / correction open	Pause consequential decision; adjudicate

Reverse QA: sample work-case audits, assessor disagreement and employee correction / contested rates by region. Pause consequential decisions on disputed records; safety permissions always require current evidence.

SOURCE HIERARCHY AND USE OF AI

Tools accelerate drafts and numerical checks; the Product Consultant owns every submitted decision.

Material	Source / treatment
Case facts and assignment constraints	Rakamin Product Consultant Case Study Brief (Sections 1–7)
Taxonomy and tasks	O*NET database: onetcenter.org/database.html; ESCO: esco.ec.europa.eu
Indonesian standards	Kemnaker SKKNI (skkni.kemnaker.go.id); KKNI reference, applicability to be verified
Digital specialism	SFIA Foundation; commercial/licence rights to be confirmed
Synthetic model	Internal workbook: one 36-month series; independent reconciliation checks
AI-assisted work	ChatGPT: drafting, UX iterations, prototype logic and content checks; Claude: independent second-opinion QA of the app, deck and brief coverage; Python: model reconciliation, automated browser/layout tests and deck production. Human owner validates the submission.
Excluded data / decisions	Oracle payroll, employee salary inference, mass layoffs, auto-placement / auto-dismissal

AI-assisted work was critically reviewed and revised; independent Claude QA identified presentation and deployment issues. AI does NOT authorise evidence tiers, capability bands, staffing decisions, legal conclusions or funding. Arithmetic was checked against the model; commercial assumptions are unvalidated. Theory: Autor–Levy–Murnane (2003); S. E. Dreyfus (2004).

BOARD DECISION / EVIDENCE GATES

Each milestone changes what leadership is allowed to approve.

Pass criteria are about evidence quality and trust—not invented placement quotas.

D30 / RESPONSE

Union briefing pack, purpose charter and by-region identity exceptions; Exposure Map (prototype) + separate Day-30 identity exception log (delivery artifact, not an app screen).

If safeguards absent: aggregate analysis only.

D60 / EVIDENCE

≥1 Backed role gate test: independent workload, approved capacity, SME rubric; Demand Evidence + Capability & Transition.

If zero Backed: no scaled training or mobility promise.

D90 / BOARD

Board decision pack: assessed / unassessed / contested people, Backed vs Claimed work, residual WE, four-gate audit; Scenario + Board screens.

Continue bounded proof, adjust, or hold each affected workstream.

FUNDING: M1–3 model allocation Rp1.25B = Rp875m existing contracted fee + Rp375m hypothetical implementation. Only incremental, scoped expenditure needs new approval.

CLOSING NOTE / THE DECISION WE MOST NEED TO TEST

Our least-confident decision: receiving work at scale

The illustrative 900 WE covers only 17.5% of the ~5,146 WE that the M18 model needs, and sufficient funded receiving work has not been demonstrated.

Within 30 days of the Day-30 finding, Operations and Technology must validate workload and rollout timing, while Finance tests contract avoidability and cost ownership.

If the evidence fails, we will limit role-specific matching and escalate the structural workforce gap rather than promise full absorption.

We ask the Board to authorise the evidence sprint and safeguarded voluntary proof, with any scale decision conditioned on operational, evidence, trust and decision gates.

DECISION REQUEST | Bounded proof now · No unverified absorption promise · Scale only after gate evidence
